rather obscured the simultaneous mounting of a five-year Economic Development Plan. This is aimed at the establishment of manufacturing industries and envisages the expenditure of over £32,000,000, the bulk of which is to be contributed by the United Kingdom. Internal Legislation under the Aids to Industries Ordinance XXI of 1959 offers attractive terms to immigrant and local enterprises. At Marsa, an Industrial Estate is rapidly being built, public utilities are being extended and facilities for technical and craft training improved. Completion is expected in 1961 of the first commercial deep-water quays, complete with storage and handling facilities. Several British business interests have already responded to these new attractions. 185 504

However, the fundamental characteristics of the Maltese economy and society remain, and the whole complex of resources, appraisal of resources and social needs and demands must be appreciated before effective forces of change will appear.

As a last short study we turn to the development of communications and public transport in the Maltese Islands, which is of significance for two main reasons. First, in the pattern that has appeared we can see the interplay of all those forces, Imperial and indigenous, which have affected Maltese life. Secondly, although the Islands are small, distance and remoteness are everywhere measured mentally as well as physically, and the impact of modern transport has revolutionised Maltese life. The road pattern in Malta is complex and generally ancient (Fig. 68). It is impossible to categorise past and present roads sufficiently precisely to show cartographically the changes that have taken place and description must necessarily be brief. As shown in Worsley's survey of 1824 (21), the main alignments were then concentrated in the central region. Away from the grid-plan streets of Valletta and the less geometrical Three Cities (22), cart and carriage roads ran out to the main casals (within the zone referred to above as now served by Dockyard special buses) and inter-connected most of the rural centres. That part of the Island north of the Victoria Lines was poorly served. In Gozo, country tracks connected the villages with the inland capital of Rabat which in turn had a carriage road to the port of Migarr. 491

By 1911 (23) traffic had increased considerably, particularly within a four-mile radius of Valletta, and the Royal Commissioners of that year ventured to question on financial grounds the need for maintaining the very large mileage of the dense central and eastern network of roads, most of which as the result of long customary use and evolution were of equal status although often strictly unnecessary. The northern and southern coastlands were still served only by a few 'feeder lines' from interior settlements, but with the bridging of the Isperanza gorge at Mosta, that town had become a route focus for the whole of the northern territory and henceforward began to rival Rabat. Military needs had resulted in improvements being made to some roads but, more important still, had called into being in 1881 a railway running from Valletta to Rabat, and later extended expensively to the camp and hospital at Mtarfa. By 1911 the operating loss had become so great as to warrant special inquiry by the Commission. The failure was due partly to the fact that the system had not been designed on commercial lines, partly because the total demand for transport was still relatively small in the areas served, but mainly because a railway service could not be flexible enough to meet the particular demand that did exist. In 1905 a tramway system, less open to objection on all these grounds, was opened. First the area between Valletta, Marsa and Hamrun was served, and later lines were built to Żebbuġ. Designed for passenger rather than freight carrying, the tramways assisted in the extension of urban influence into the country. Then as now, however, that indented coastal configuration to which Malta owes her natural harbours, and around which resides the majority of the island's population, made land communication in the conurbation area tortuous and lengthy. Innumerable ferries and the *dghajjes* boats in Marsaxlett and Grand Harbour offered more convenient carriage. 496 [505]

During and after World War I, motor vehicles made their appearance and the railroad and tramways rapidly disappeared leaving as sole traces of their 494
